5.2.4.4 HDMI

BOU-588 device is delivering an alternative entertainment application by that user can share videos and photos that are played in personal mobile device with people who is sitting around. By connecting Smartphone and BOU-588 device via HDMI cable, user can transfer images from Smartphone to automotive infotainment system.

Firstly, user needs to connect Smartphone and BOU-588 device by plugging a HDMI cable into the HDMI adopter which is demonstrated as:

Please note that you need to purchase an MHL cable connect your Smartphone to BOU-588 before using this function.

Secondly, user can touch the icon  to active the HDMI function. Once the HDMI function is turned on, the image signal will be transferred from Smartphone to vehicle infotainment system's display automatically.

Meanwhile, user also can exit the interaction by clicking the display again if he/she wants to.

It exists an exception that HDMI function will be closed if the connecting is interrupted by any uncertainty.

Note:

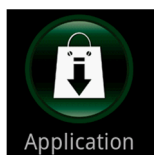

1. BOU-588 device **ONLY** support 720P as maximum resolution of input signal, user needs to confirm whether the Smartphone is compatible to 720P resolution output.
2. The warning message will pop-up automatically when acting the HDMI application without plugging any HDMI cable. The warning message is:

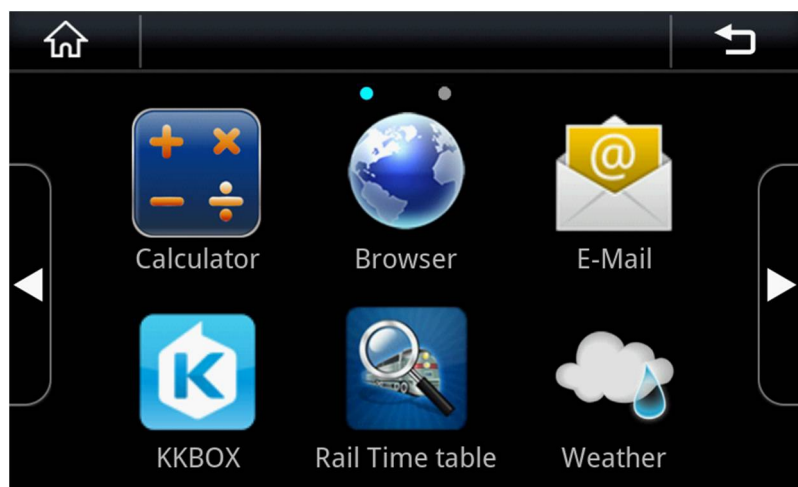

5.2.4.5 Applications

As the same as other android smart phone, BOU-588 device is delivering eight android applications with itself. There android applications are including Notes, Weather, KKBOX, etc. However, as a result of that most of these android applications are developed by third parties, neither Rhoson is permitted to embed these android applications into any automotive infotainment system.

Firstly, user needs to click the icon  in order to enter the application page. After then, user will see the page as showed below:

Icons of this page are identified as:

ICON	Identification	Description
	Home	User can return home directly by clicking this icon
	Return	User can exit application page by clicking this icon
	Next page	Go to next application page
	Previous page	Back forward to previous application page

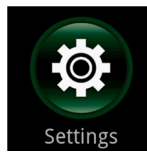

Note:

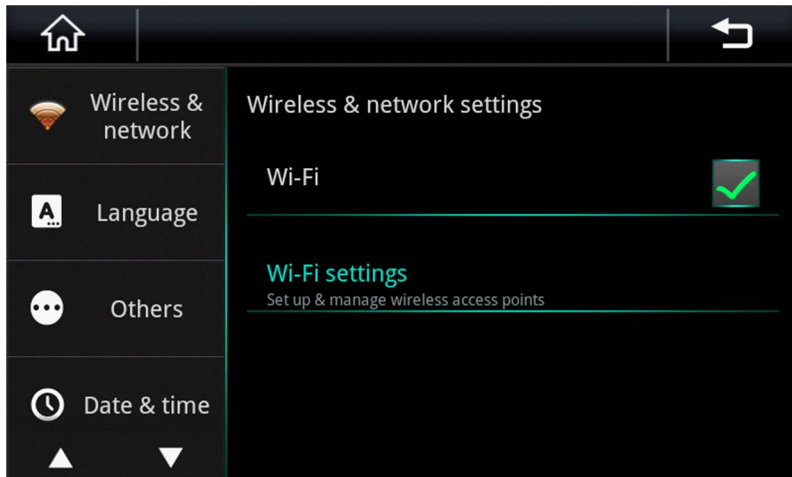

The operation of individual android application will not be demonstrated here and it is strongly recommended that user can experience this application as what he/she might do to smart phone.

5.2.4.6 Settings

Here is showing whatever user can do about setting up some system preference.

Firstly, user needs to click icon  in order to enter system setting page. After then user will see a system setting picture as showed below:

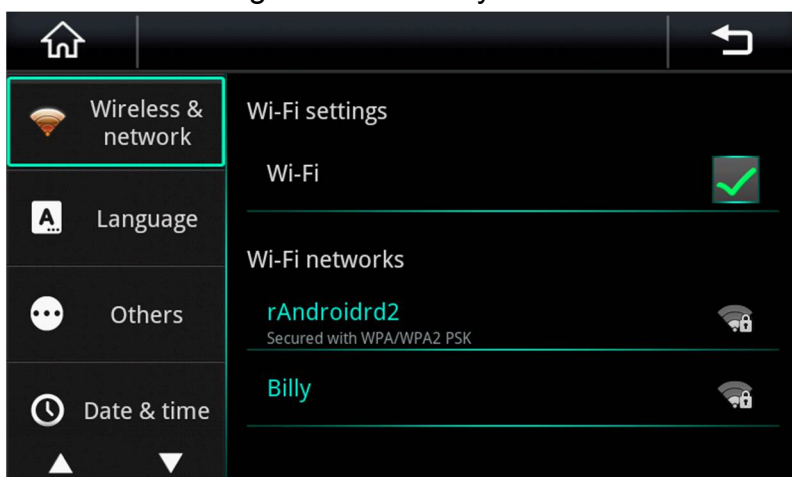

There are few setting items by that user can change system preference, including Wireless & network, Language, Date & Time, Others & About. Every individual setting function is illustrated in detail as:

➤ **Wireless & Network**

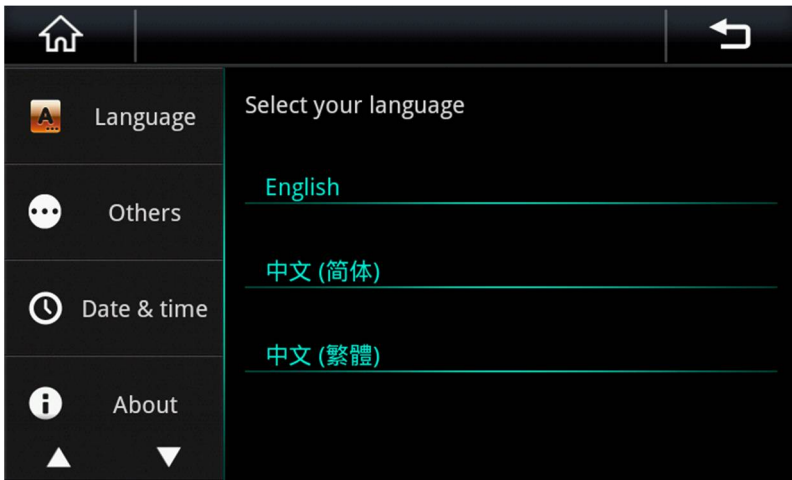

In wireless & network setting item, user can choose and connect any available WiFi signal in terms of following steps.

1. Making sure that the wireless function is turned on by clicking the option “Wi-Fi”.
2. Selecting the item “ Wi-Fi networks”, then BOU-588 device will automatically detect and show out a list of available wireless access points (WAP) below.
3. Passwords might be necessary to user in order to access a WAP via BOU-588 device

➤ **Language**

BOU-588 android internet board is delivering three different system languages, including Traditional Chinese, Simple Chinese & English. Traditional Chinese is identified as default in BOU-588 device.

➤ **Date & Time**

BOU-588 android internet board is delivering either automatic method or manual method in setting system's date and time. It is recommended that user can make the system sync time & date automatically by clicking the option "Automatic" as showed below:

OR user also can set up date, time zone and time manually by himself/ herself if necessary. It is noted that manual setting options can only be active when automatic option is disable.

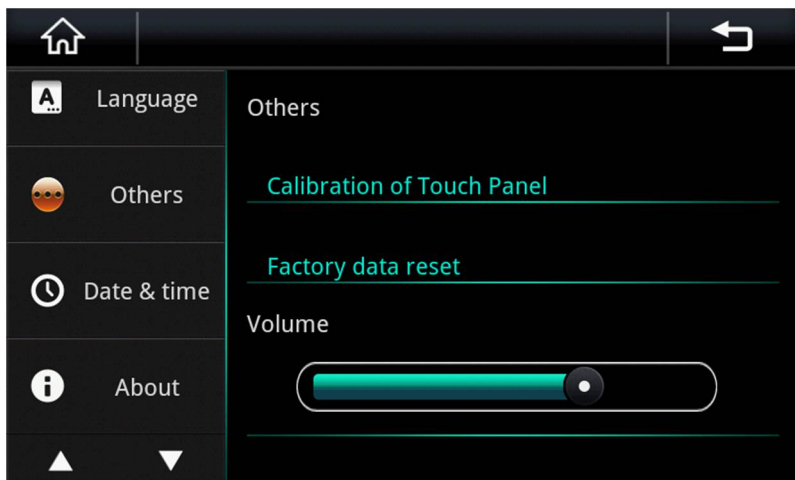

Note: BOU-588 android internet board is delivering many kinds of android APK with itself. Some of these android APK, such as KKBox, can not work functionally until the system's time setting is correct. Therefore, user is requested to confirm system time setting before turning on these android APKs.

➤ Others

In this sub-function, BOU-588 is delivering three sub functions, including Calibration, Factory reset & Volume, by that user can adjust system preference. Here is showing more in detail:

1. User can calibrate the touch panel sensitivity once the touch performance is not as good as beginning.
2. As the same as other systems, Android system might also go instable as long as time goes by. Therefore, user can default the system by resetting it via Factory data reset function.
3. User can volume up or volume down the system volume by adjusting the scroll bar as showed below:

➤ About

It is demonstrating system software information in this page, as showed below:
